PROJECT 3: PRT362S T2 INDIVIDUAL: WO2

Name:	Imaan Achmat
Student Number	230458971
Group Number:	WO2
Course Code:	PRT362S

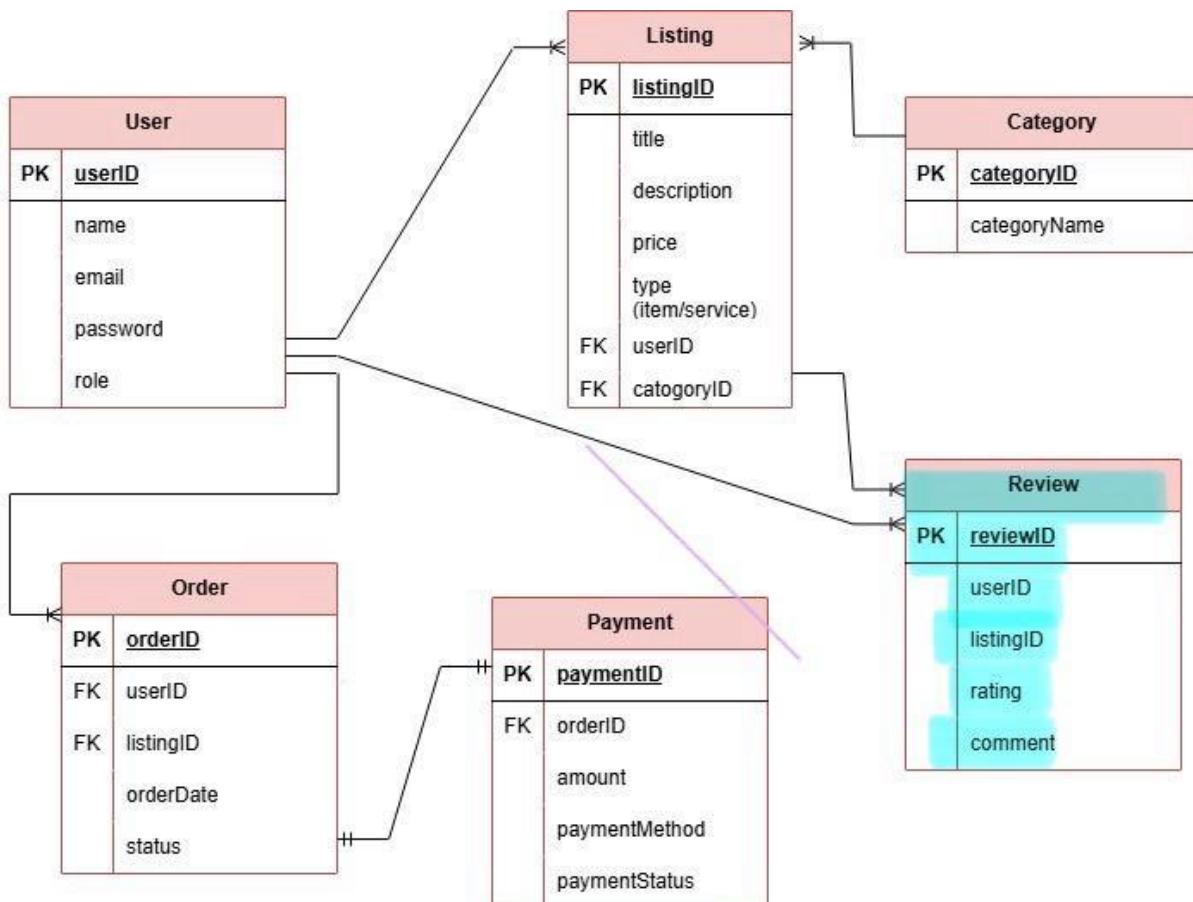

1. Introduction:

This report presents my individual contribution made towards the development of our group CPUT Marketplace. The focus on my report is the Review Module, which allows users to rate and review items and services on the platform. This report includes our Entity Relationship Diagram (ERD), business rules of the Review Module, Review Module wireframes, and a reflection discussing the development process and the challenges I have encountered.

2. Entity Relationship Diagram:

The Review Entity was designed to allow users to provide feedback on items and services within the marketplace. The entity includes attributes such as reviewID, rating, and comment. Relationships were created between User, Listing, and Review to ensure that reviews are linked to both the user reviewing and the listing being reviewed.

ERD

3. Business Rules:

1. A review must be linked to one registered user.
2. A review must be linked to one listing.
3. A user can write multiple reviews on different listings.
4. A listing can receive multiple reviews from users.
5. Each review must include a rating.
6. Ratings must be between 1 and 5.
7. A review may include an optional comment.
8. Only users who have purchased or used a listing may submit a review.
9. Reviews cannot be edited once submitted without administrator approval.
10. Administrators may remove inappropriate or offensive reviews.

4. Wireframes:

Wireframes 1: This wireframe shows the screen where users can write and submit a review.

5. Reflection:

During the process of this project, I was responsible for the Review Module of the CPUT Marketplace. My role included creating the ERD, specifically for the review entity, developing business rules, and designing wireframes for how users would write and view reviews on the platform. Working on this section helped me understand how different parts of a system connect and how important user feedback is in creating it.

One of the main things I learned during this process was how database relationships work and how business rules help control how a system functions. I also learned more about wireframing that are simple and easy for users to understand.

A challenge I experienced was deciding which entities and relationships were necessary while keeping the ERD simple and within the required limit. I also struggled at first with creating business rules that were clear and realistic for the review module.

Overall, this project helped me improve both my technical and teamwork skills. It also gave me a better understanding of system analysis and design.
